

Figure 1: Schematic representation of the experimental design. The diagram illustrates the sequence of events in the experiment. It starts with a 'Stimulus' phase where a red dot is presented. This is followed by a 'Response' phase where the subject provides a response. The sequence then moves to a 'Feedback' phase. The entire process is repeated for multiple trials. The diagram is divided into two main sections: 'Stimulus' and 'Response'. The 'Stimulus' section shows a red dot on a black background. The 'Response' section shows a red dot on a black background. The 'Feedback' section shows a red dot on a black background. The sequence is repeated for multiple trials.
